

Annette Langer-Gould, MD, PhD is the Regional Lead for Clinical and Translational Neuroscience for the Southern California Permanente Medical Group and practicing MS specialist at Los Angeles Medical Center. She completed her residency, PhD in epidemiology and post-doctoral fellowship at Stanford University. She has been studying different aspects of MS and pregnancy for over 15 years. Dr. Langer-Gould's current epidemiologic research focuses on the interplay between modifiable factors including breastfeeding, vitamin D and sun exposure with genotype in determining MS susceptibility. Her international research collaborators include Dr. Kerstin Hellwig (German MS & Pregnancy Registry), the AusImmune study group (Dr. Robyn Lucas) and the Dr. Fredrik Piehl (Swedish MS Registry). She also leads a team in Kaiser that develops implements and evaluates programs to provide high quality affordable care for individuals with MS and other neurological disease. She has received grant support and awards from the National Institutes of Health, Patient Centered Outcomes Research Institute, and the National MS Society. She has served on committees and advisory panels for the National Institutes of Health, Institute of Medicine, American Academy of Neurology, the National MS Society.
