

Short CV

Georgina Arrambide, MD, PhD, trained as a neurologist (2008) and as a multiple sclerosis specialist (2009) at the National Institute of Neurology and Neurosurgery in Mexico City. She works as a clinical neurologist and researcher at the Multiple Sclerosis Centre of Catalonia (Cemcat), Neurology-Neuroimmunology Department at Vall d'Hebron University Hospital in Barcelona, Spain, since 2009. She was appointed professor of Neurology-Neuroimmunology at the Universitat Autònoma de Barcelona (UAB) in 2015. She has one master degree in immunology, one in neuro-immunology, and a PhD. Her main area of research involves the identification of clinical, radiological, and biological diagnostic and prognostic markers in patients with clinically isolated syndromes (CIS). Her work has led to publications that have informed some of the modifications included in the 2017 revisions to the McDonald criteria for diagnosing multiple sclerosis, as well as to the identification/confirmation of prognostic markers of disease evolution at the time of the CIS. She has also participated in the development of a paediatric acquired demyelinating diseases cohort and, having worked previously with patients afflicted with neuromyelitis optica spectrum disorders (NMOSD) in Mexico, has been involved in both uni- and multicentre projects related to this disease and, more recently, with anti-MOG associated disorders.
