

Catherine Lubetzki is professor of Neurology at Sorbonne University, head of the department of Neurology and coordinator of the MS center in Salpêtrière Hospital, Paris, France.

She is or has been involved in several committees and funding boards : member of ECTRIMS (European congress on multiple sclerosis) executive committee, past-president of the scientific committee of ARSEP (French multiple sclerosis association for research), member of International Progressive MS Alliance Scientific Steering Committee. She is elected chair for the next Gordon Research Conference in myelin. She recently joined Sorbonne University foundation as vice-president.

Her clinical activity is mainly dedicated to the management of multiple sclerosis patients, the department of Neurology being the most important clinical center for multiple sclerosis in France, with a very large active file and a very active clinical research activity. This clinical activity is very complementary to her scientific activity, developed within her research group in the Brain and Spinal cord Institute (ICM) within the Salpetriere campus in Paris.
