

Joost Smolders obtained his MD and PhD in neuroimmunology cum laude at Maastricht University Medical Center in the Netherlands. After completing his post-doctoral and specialist training in neurology, he works since 2019 as general neurologist at the department of neurology and MS center of the Canisius Wilhelmina Hospital, a large city hospital in Nijmegen, the Netherlands. He is appointed as senior researcher at the Huitinga neuroimmunology group at the Netherlands Institute for Neuroscience (Amsterdam, the Netherlands) to study the role of tissue-resident lymphocytes in multiple sclerosis (MS). Previously, he worked on the association of vitamin D status with disease outcomes in multiple sclerosis and the development of the SOLAR trial on vitamin D supplementation in MS.
